

Direct the SAR 40M to the 8 regions below 65% — weighted to the biggest gaps

We ask you to approve: a gap-weighted SAR 40M allocation — SAR 34.5M to Najran, Northern Borders, Al-Baha and Jazan, and SAR 5.5M to Asir, Tabuk, Hail and Al-Jouf — with a 6-month checkpoint.

66.2%

national adoption — above the 65% target

8 of 13

regions still below 65%

4.1 pts

largest gap (Najran, 60.9%)

Big Idea: The national average hides eight lagging regions; a gap-weighted SAR 40M is the fastest route to every region reaching 65%.

Nationally, Tayseer is on track: 66.2% adoption clears the 65% target

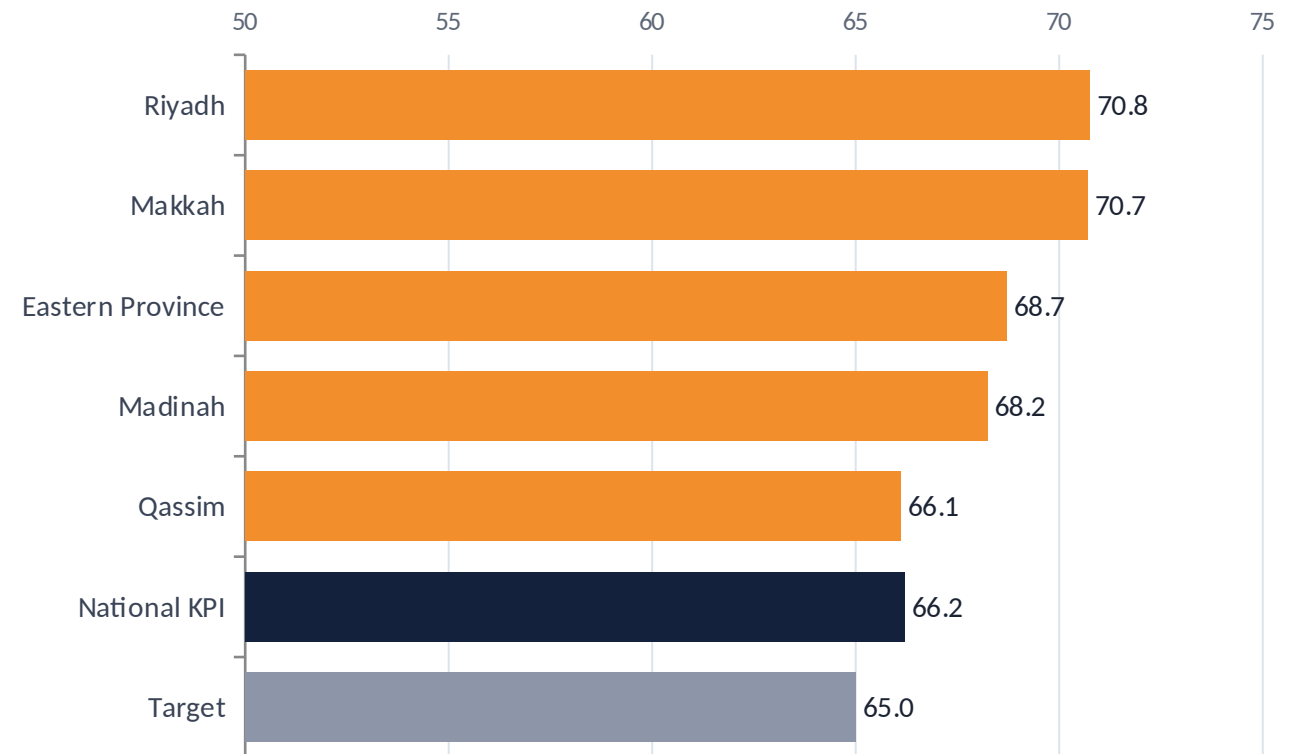

NATIONAL DIGITAL ADOPTION

66.2%

+1.2 pts above the 65% target

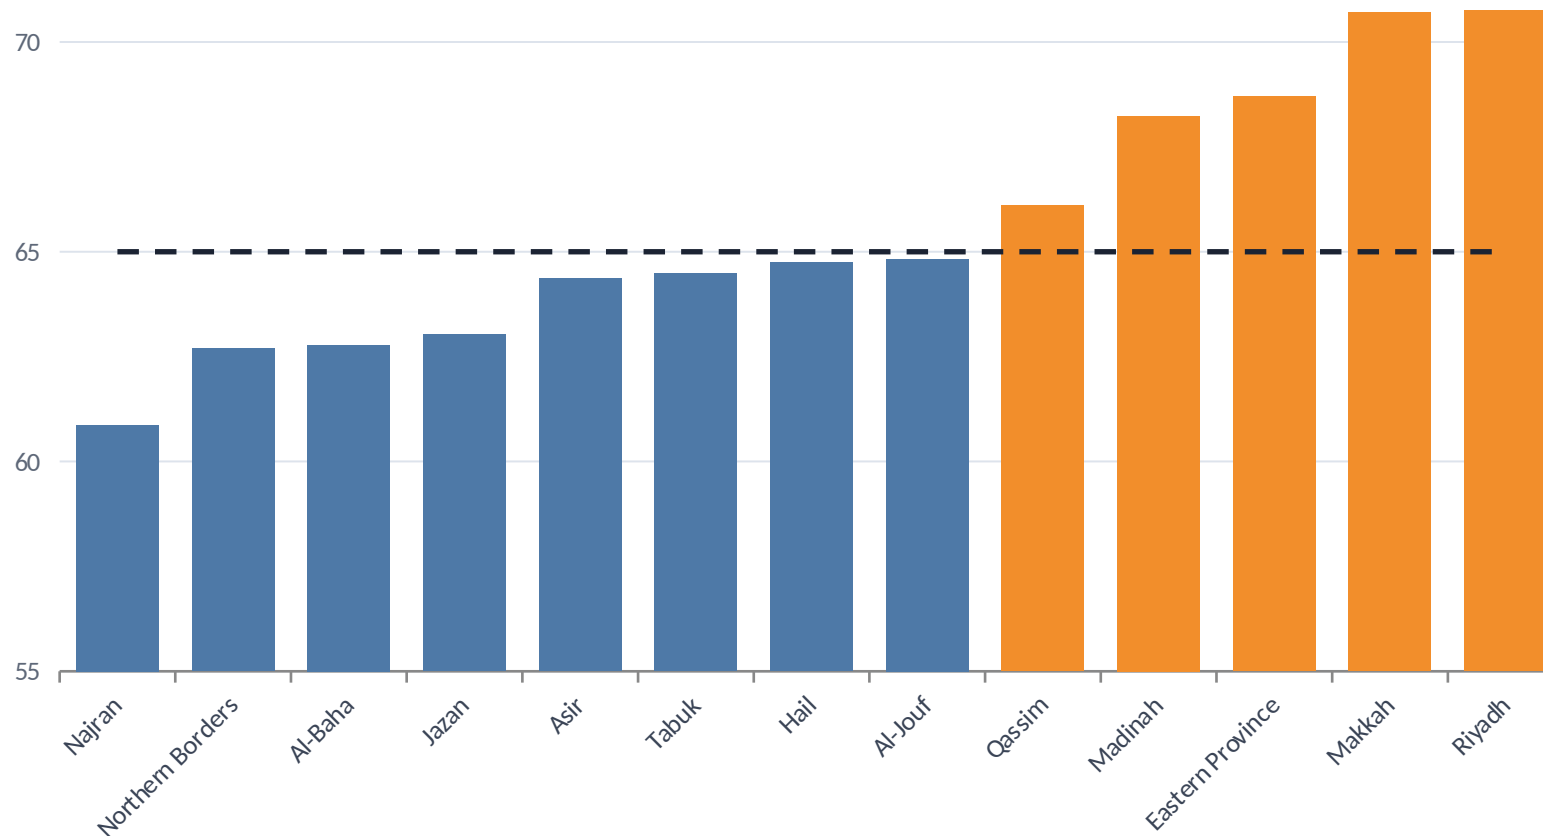

The headline KPI says the program is working at national level — the question is whether that holds everywhere.

Five regions are above target, led by Riyadh and Makkah

The average hides the gap: 8 of 13 regions are below 65%

Dashed line = 65% target

Below target (8)

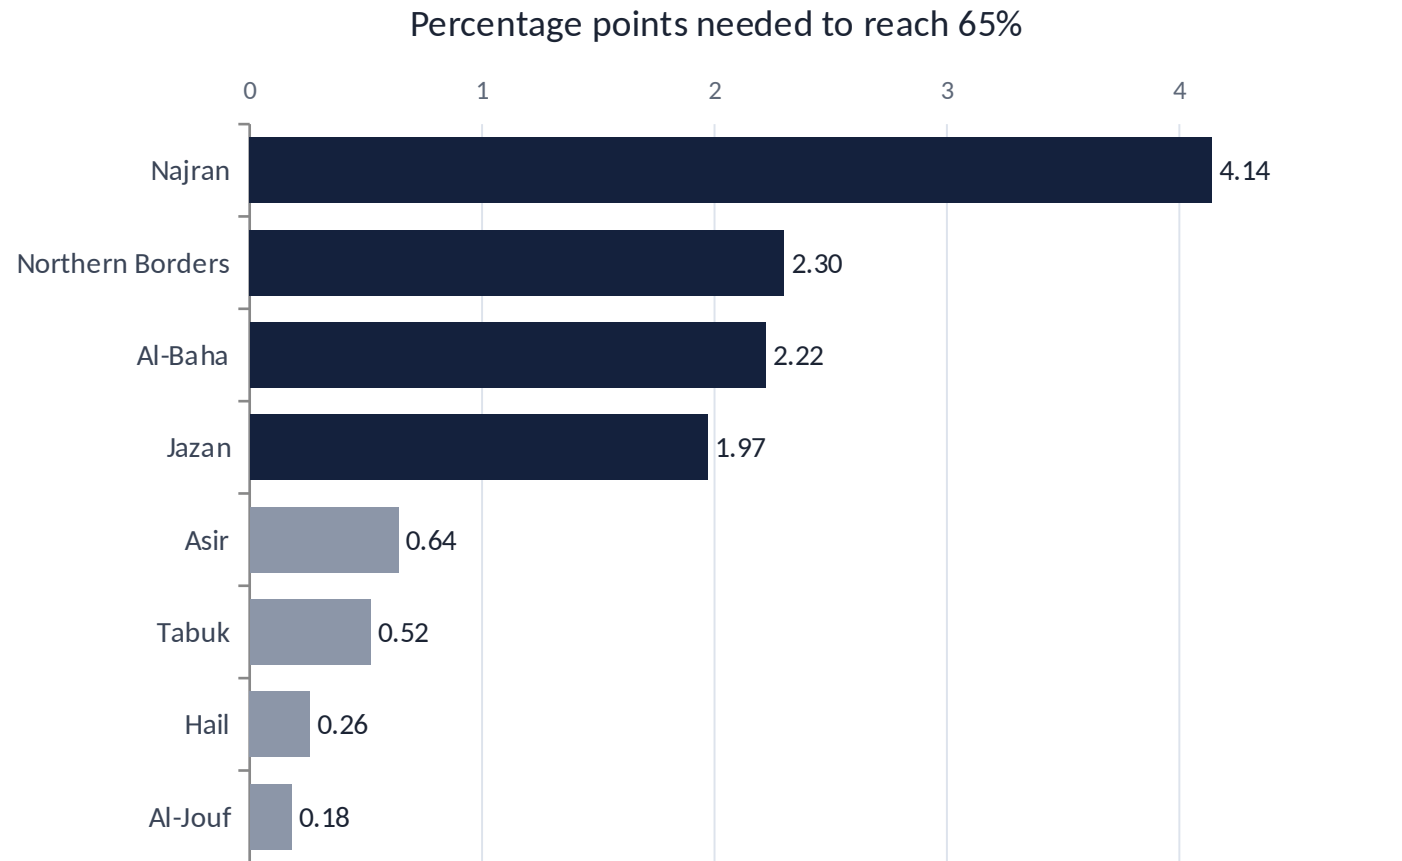

On / above target (5)

9.9 pts

spread between Riyadh (70.8%)
and Najran (60.9%)

Every lagging region is outside the
big three urban centers — the
national figure is carried by Riyadh,
Makkah and the Eastern Province.

Four regions hold 87% of the total gap to target — Najran alone holds a third

Tier 1 — deep gaps

Najran 4.14 • Northern Borders 2.30 • Al-Baha 2.22
• Jazan 1.97

10.6 of 12.2 gap points (87%). These regions will not cross 65% without sustained investment.

Tier 2 — near target

Asir 0.64 • Tabuk 0.52 • Hail 0.26 • Al-Jouf 0.18

All within 0.65 pts. Small, targeted spend should tip them over — quick wins.

Three realistic ways to deploy SAR 40M — only one funds the gap where it is

A Spread evenly

SAR 5M to each of the 8 below-target regions

- Simple and easy to explain
- Najran gets the same as Al-Jouf, despite a gap 23× larger
- Over-funds the near-target regions

Weak fit to evidence

B Concentrate on Tier 1

SAR 10M each to Najran, Northern Borders, Al-Baha, Jazan

- Targets 87% of the gap
- Leaves Asir, Tabuk, Hail, Al-Jouf at risk of staying just under 65%
- Equal split ignores Najran's larger gap

Partial fit

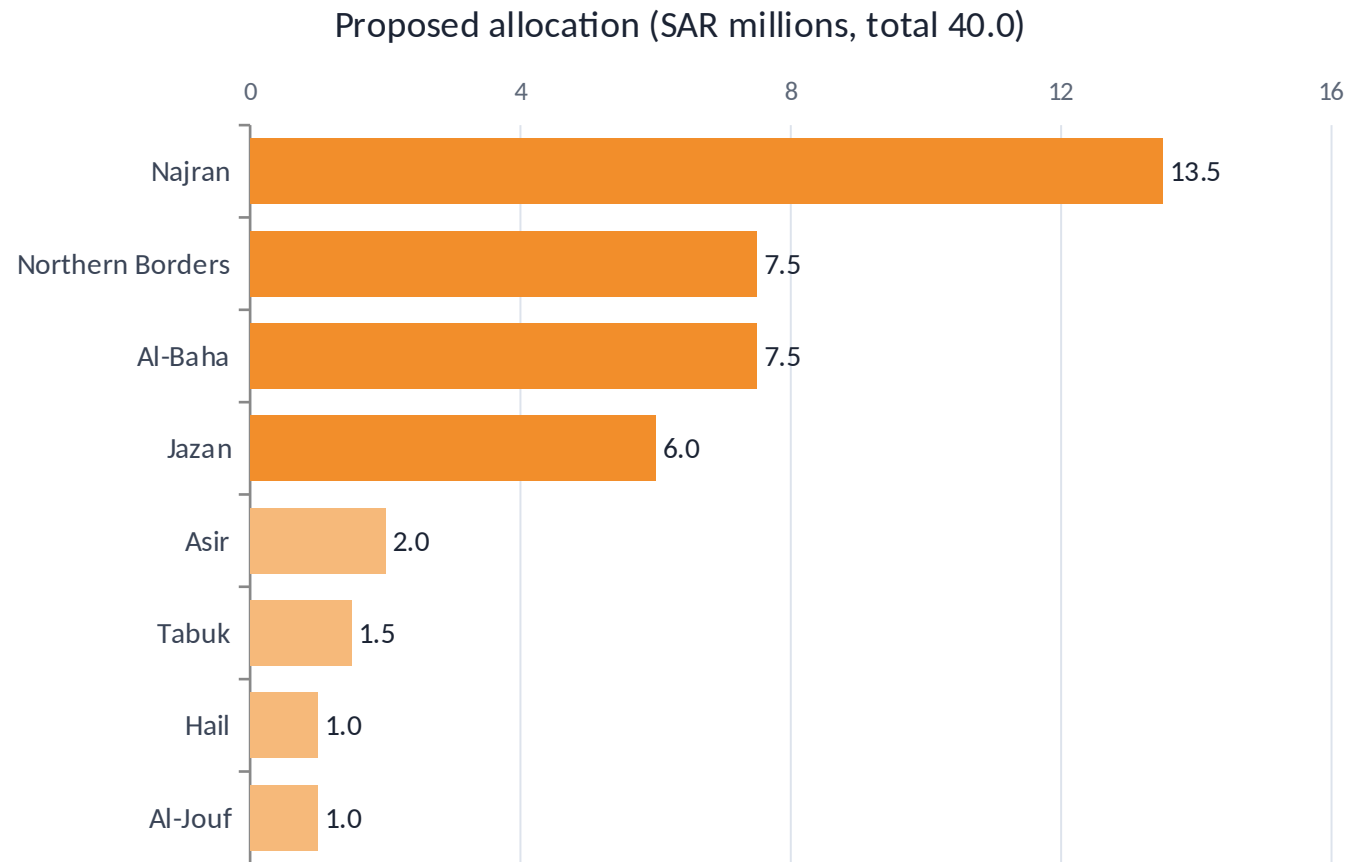

C Gap-weighted, two tiers

SAR 34.5M to Tier 1, SAR 5.5M to Tier 2 — in proportion to each gap

- Money follows the size of each gap
- Covers all 8 regions, incl. quick wins
- Needs a checkpoint to confirm progress

Best fit to evidence

Choose Option C: weight SAR 40M by gap so every region can reach 65%

Traceable

Each region's share $\approx$ its share of the 12.2-pt total gap (e.g. Najran 34% of gap $\rightarrow$ SAR 13.5M).

Complete

All 8 below-target regions are funded — none is left just under 65%.

Expected effect

Tier 2 should cross 65% first (≤ 0.65 pts to go); Tier 1 closes the remaining 10.6 pts over 12 months $\rightarrow$ 13 of 13 regions on target.

Approve the gap-weighted SAR 40M today; we report back at a 6-month checkpoint

Decision needed today: approve the allocation and the April 2027 checkpoint.
